

Profile

I'm a creative artist who enjoys interface design, development and solving problems with the simplest solution. I have experience with both front and back-end development and an understanding of what's easy for end-users to use and developers to implement. A nice blend of logic and creativity.

My expertise is in interface design and development for an Internet environment. I'm always researching to keep on top of design standards and emerging technologies. I want every finished product to be both intuitive to use and visually stimulating.

Experience
